## CASH RECEIPTS FROM FARMING IN OHIO 1967

Cash receipts to Ohio farmers from marketings and government payments totaled \$1,304,652,000 in 1967. Return from the sale of farm commodities was down over 3 percent from the revised 1966 figure, while government payments fell 13 percent. Total cash receipts from farming in 1967 were over 4 percent lower than a year earlier.

Farm marketings during 1967 amounted to \$1,234,297,000. Of this total, cash receipts from the sale of livestock and livestock products accounted for \$696,266,000 or 56.4 percent. The marketings of crops accounted for \$538,031,000 or 43.6 percent of the total. Cash receipts from crops were down nearly 1 percent while cash receipts from livestock and livestock products were down over 5 percent from comparable revised 1966 estimates.

The sale of dairy products continued to be the largest single source of cash receipts to Ohio farms, accounting for 19.9 percent of the State total returns from farm marketings. Cattle and calves ranked second, with 14.7 percent; corn and hogs, each accounting for 13.3 percent were next in rank, while soybeans accounted for over 10.5 percent. These five commodities accounted for 72 percent of the total cash receipts from sales received by Ohio farmers in 1967.

Decreases of 6 percent in the food grains and 18 percent in soybeans more than offset an 8 percent increase in feed crop cash receipts. The decrease in food crop cash receipts was due to lower prices while quantity sold and price of soybeans were both below the 1966 figures. All of the increase in feed crop cash receipts was due to a 13 percent increase in corn cash receipts, which offset decreases in oats, hay, and barley. Several increases from 1966 were recorded in other crops. Vegetables gained 10 percent, sugar beets 10 percent, tobacco 33 percent, greenhouse and nursery products 9 percent, and fruits and nuts 4 percent.

Cash receipts from meat animals were down 8 percent from 1966. Lower returns from cattle and calves were due to lower marketings, while income from hogs was down due to a lower price, and receipts for sheep and lambs were lower due to a combination of both. Hogs showed an increase in pounds marketed but that increase was only about 7 percent. Cash receipts from dairy products in 1967 were slightly over 2 percent above a year earlier. Receipts from poultry were down 14 percent from the revised 1966 estimate. Cash receipts from wool marketed were down about 27 percent while honey and beeswax receipts were down over 64 percent.

In 1967, government payments amounted to \$70,355,000 or over 5 percent of the total cash receipts in Ohio. The Feed Grain Program was again the largest program accounting for \$38,068,000. The Wheat Program accounted for \$18,928,000; Conservation Payments \$5,986,000; and the Soil Bank Program \$1,709,000. Crop-land Adjustment Payments amounted to \$3,664,000. Payments under the Sugar Act and Wool Act accounted for \$1,309,000 and \$691,000 respectively.

Eight of the ten leading counties in total cash receipts from farming had total returns of over \$25 million in 1967. Darke County led all others again this year having cash receipts of over \$37 million. Five other counties - Wayne, Fulton, Wood, Mercer and Putnam - each had total receipts of over \$30 million during 1967. Wayne County continued as the leading county in the sale of dairy products, Fulton County had the greatest returns from the sale of cattle and calves, and Clinton County led in cash receipts from the sale of hogs in 1967. Leading in cash receipts for corn was Darke County, while Wood County led in cash receipts for soybeans and for wheat.

#### PROCEDURE

Estimates of cash receipts by county from farm marketings in Ohio were published initially in 1927 and annually since 1929. These county estimates of cash receipts are published by the Department of Agricultural Economics and Rural Sociology of the Ohio State University and the Ohio Agricultural Research and Development Center in cooperation with the Statistical Reporting Service of the U. S. Department of Agriculture. This bulletin contains the 1967 Ohio county cash receipts estimates, and revised 1966 estimates for the State.

Gross and Net Farm Income data are presented in Table III. The information is available only at the State level, but the relative income situation of the Ohio farmer can be observed over a period of years. It is interesting to compare the net income figures with total cash receipts and realized gross income for the State by years.

Cash Receipts represent gross returns from the actual sale of crops and livestock during the calendar year. The value of home consumption and inter-farm sales are not included as cash receipts. Production expenses such as feed, fuel, fertilizer, and purchases of feeder animals are not subtracted from cash receipts. The addition of government payments to cash receipts provides a measure of gross cash income, or total cash receipts from farming.

Current cash receipts estimates for Ohio and other states appear in the USDA's Farm Income Situation--211--Supplement, August 1968. These estimates are prepared by the Economic Research Service of the U. S. Department of Agriculture from basic data provided by the Statistical Reporting Service, the 1964 Census of Agriculture, and other sources. The State estimates published in this bulletin may differ from previously published estimates due to revisions in marketings, inshipments, inventory numbers, etc., as more complete information becomes available.

Data from milk market administrators provided a basis for allocating receipts of milk from producers at plants operating under the Federal Order to counties. Data from the Animal Health Division of the Agricultural Research Service provided information on the location by county of producers selling milk to dairy plants. The number of producers in each county was used as a basis of breaking down total receipts at plants not under Federal Order to counties. This assumes annual deliveries per producer to each plant would not differ significantly at the county level. Each grade of milk was considered separately in arriving at the county total cash receipts.

As in recent bulletins, the sale of dairy cows and veal calves has been included with the sale of cattle and calves. Poultry cash receipts include income from the sale of eggs, farm chickens, broilers and turkeys during 1967. Because of the confidential nature of the data, cash receipts from turkey eggs and other poultry are included as other livestock. Included with sheep cash receipts are returns from wool sales as well as income from sale of sheep and lambs.

Cash receipts from the sale of greenhouse vegetables are included with vegetable cash receipts, and not with greenhouse and nursery. The county vegetable estimates are a combination of field grown vegetables and vegetables grown under glass. For purposes of ranking, potatoes were considered as separate from vegetable cash receipts. Cash receipts from fruit crops are made up of returns from small fruits as well as from tree fruits and nuts.

Two important factors influencing any comparison by counties are the size of the counties and the major source of cash receipts in each county. Table VI presents the average cash receipts per farm and per acre by county. These averages aid in the comparison of counties with similar farming practices better than a comparison of the total cash receipts. The average per farm and per acre is based on the 1964 U. S. Census of Agriculture "number of farms" and acres of "all land in farms" projected to 1967 levels. In some counties the average per acre cash receipts are relatively low because the Census designated acres of "all land in farms" includes a considerable amount of land not cultivated and some not even used for pasture. The 1964 Census defined a farm as any tract operated as a unit of 10 or more acres if the estimated sales of agricultural products for the year amounted, or normally would amount to at least \$50; or if less than 10 acres, had sales of agricultural products totaling \$250 or more.

County estimates of cash receipts do not include the value of commodities used on farms. For example, producers may market grain and hay in the form of beef or milk rather than in its original form. By counties the relative importance of some commodities would be different if the value of these commodities used on farms where produced were computed. Figured on a season average price basis for each commodity, the value of selected crops used on farms where produced in 1967 would amount to \$113 million for corn, \$73 million for hay and \$14 million for oats.

This bulletin has been prepared through the efforts of many people. Included are personnel of the Ohio Agricultural Stabilization and Conservation Service, Federal Milk Market Orders operating in Ohio, the Ohio Department of Agriculture, the Ohio Agricultural Research and Development Center and the Agricultural Research Service. Special recognition is due the professional and clerical work done by the staff of the Ohio office of the Statistical Reporting Service. However, the greatest recognition is due the large number of Ohio farmers and agribusinessmen for their interest and help in providing the basic data used in compiling the information for this bulletin.

TABLE I

CASH RECEIPTS FROM FARM MARKETINGS AND GOVERNMENT PAYMENTS, OHIO, 1930-1967

Year	Farm Marketings				Government Payments	Total Cash Receipts and Government Payments	Percent of All Commodities	
	Livestock and Livestock Products	Crops	Total Livestock and Crops	Livestock and Livestock Products			Crops

1/ As published in the Farm Income Situation-211-Supplement, August, 1968. Percents may not be accurate to one-tenth of one percent because of method of machine computations. 2/ Commodities do not add to group total because the value of turkey hatching eggs, and other poultry which is included in other livestock is included in the poultry and egg commodity group total. 3/ Fresh only. Processing included with miscellaneous vegetables. 4/ Sweet potatoes, asparagus, lima beans, snap beans for processing, beets, broccoli, cauliflower, eggplant, kale, green peas, watermelons, miscellaneous vegetables. 5/ Blackberries, blueberries, raspberries and other, apricots, plums and prunes, walnuts, chestnuts and other. 6/ Sorghum grain, other grains, broomcorn, birdsfoot trefoil seed, Kentucky bluegrass seed, sunflower seed, bromegrass seed, fescue seed, lespedeza seed, orchardgrass seed, redtop seed, ryegrass seed, other seeds, other field crops.  
\*Less than 0.05 percent.
